Week 9 Pair Exercises: Fred's Frozen Pops

Context

Fred's Frozen Pops has asked you to create their homepage and a contact form. The design team has created mockups of the homepage and contact form, both in desktop and mobile formats.

Before you start, be sure to review the provided CSS for styling rules that are already defined, and look at the mockups that follow.

Did You Know?
The earliest known frozen pops date as far back as 1872. Back then, a frozen pop was called a Hokey-Pokey.
Frozen pops are also known as freezer pops, ice lollies, and ice pops.
The world's largest frozen pop was made in 1997 and was 21 feet tall.
Frozen pops have become so POP-ular that a common arts and craft item is called a popsicle stick, named after the most famous brand of pop.
Fred's Great Frozen Pop Race
Don't forget to sign up for the race! Each participant will receive their own box of pops when they reach the end.
Get refreshed this Summer!
Mark this very special occasion of the launch of Fred's Frozen Pops by buying a gift from our stunning array of items, shipped directly from Cleveland.

Requirements

- Use semantic HTML
- Use CSS Grid for the main layout
- Use CSS ID/class selectors and combinators
- Apply an effect to hyperlinks when the mouse is over it

Notes and tips

- The mobile breakpoint can be 800px since a separate tablet layout isn't required.
- Make sure your final design is as close to the mockups as possible—note the margins, paddings, heights, and widths.
    - If you're off by a pixel or two, that's fine, but your finished product must closely resemble the mockups.
- Take advantage of starting code in `styles.css` - it's there to help you get started.
- It might be helpful to use Grid or Flexbox to align elements within sections.
